

Barrel Clamps

Barrel Clamps - Known as "Barrel Clamp", this hydraulic accessory is used on lift trucks in order to clutch objects that you need to transfer with the lift truck. Usually, they're used in order to paper rolls, barrels, and handle kegs, together with a few barrel clamp designs being able to revolve the load. Like for example, the revolving function allows a forklift operator to slot in a vertically stored paper into the horizontal intake of a printing press.
