

Carriage Roller

Carriage Rollers - Carriage rollers are specifically designed bearings that are used on lift masts to be able to help them perform in challenging environmental conditions. Lift masts are frequently subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences such as dust, cold, heat, moisture, contamination and aggressive ambient air. Thus, the guidance arrangements of lift masts should be specifically tough and have a certain high load carrying capability.

Carriage rollers have been created as the answer for working in various environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts must be cost-effective and maintain operational security while having the capability to handle a specifically high load carrying capacity.
